

Hark! What Light Under Yonder Eyelid Shines?

We've all had the awkward and frustrating experience of trying to look UNDER someone's eyelid. There are several available techniques - grab the eyelashes, flip the lid over a Q-tip/stick, etc. - with varying degrees of success.

Our local ER docs have shared a crafty, homemade solution for this touchy issue using a large paperclip and a light source. Check out our very own Drs. Steve Wheeler and Brian Farrell demonstrating their eyelid viewing technique: <https://youtu.be/PrEVzj5wU2Y>

(with thanks to Dr. Bruce Campana for sharing the video)
