

# PATIENT MEDICAL HOME

## Highlights

This project provides opportunities for physicians to collaboratively design enhancements to primary care within their clinics.

- Strengthens the notion that it's vital to include the physician perspective in designing the primary care model that is right for our community.
- Supports clinics in developing team-based care under the current fee-for-service model (with a focus on LPNs and pharmacists).
- Supports clinics to reflect on their strengths and opportunities for improvements within their practices.
- Keeps physicians informed.

**Project: Apr 2017 — Mar 2019**
