

SURGICAL OPTIMIZATION

Highlights

This project aims to optimize perioperative care for patients with sub-optimal glycemic control, who are scheduled to undergo elective surgery at PRH.

The overall goal is to integrate specialized hospital care, specialized community service programs (SCSPs) and family physicians by developing standardized protocols to guide the patient along a pathway from their family physician's office through acute care and back to community.

- Reducing surgical site infections.
- Improving patient and provider satisfaction.

Project: Sep 2018 — Mar 2020
